A full-stack developer with a passion to learn new technologies, and a 5 year background in pharmacy and pharmacy benefits management.

Skills

JavaScript, AngularJS, NodeJS, MongoDB, Mongoose, Express, GitHub/Git, Firebase, NPM, jQuery, HTML, CSS, Bootstrap, MaterializeCSS

Projects

The Logos Academy - A MEAN stack application, which allows gyms and their members to track fitness goals using an expert-tested curriculum.

- Designed and managed data structure and all API endpoints. Wrote functionality to update status of percent complete of each fitness level.

- Created gym programming page, where a gym can update and manage their own programs.

T-Rx Pharmacy Software - MEAN stack application, which allows a user to add new patients, type new prescriptions, fill medications, and verify orders.

- Designed and wire-framed software from front to back using previous pharmacy background knowledge.

- Created a patient profile page which checks the status of a medication order and tells the user where the medication is at in the fill process.

Other Experience

PHARMACY TECH/PBM MANAGER, HOSPICEMED; MURRAY, UT – 2012-2015

Began as a pharmacy technician filling and typing medication orders. Shortly afterwards I was promoted to managing the companies PBM. I managed hundreds of patient's individual plans based on hospice diagnosis through the PBM portal, and constantly updated the statuses of each patient based on health changes.

Education

DevMountain – Full-Time Immersive Web Development Program
